Event Go: All fun in one place!

Graduation Project | Digital Egypt Pioneers Initiative (DEPI) - .NET Web Development Track

Project Overview

- Event Go is a user-friendly platform designed to simplify booking and payment for entertainment experiences, including cinema, padel courts, and concerts.

- Purpose: Streamline the booking and payment process for a seamless experience.

Project Categories

concerts

The Concerts section lets users book tickets for upcoming live events, displaying details like the concert time, performing artist, and available seating. Through the Concert Ticket class, users can book their seat and pay securely online via credit card, offering a quick and easy way to enjoy their favorite concerts.

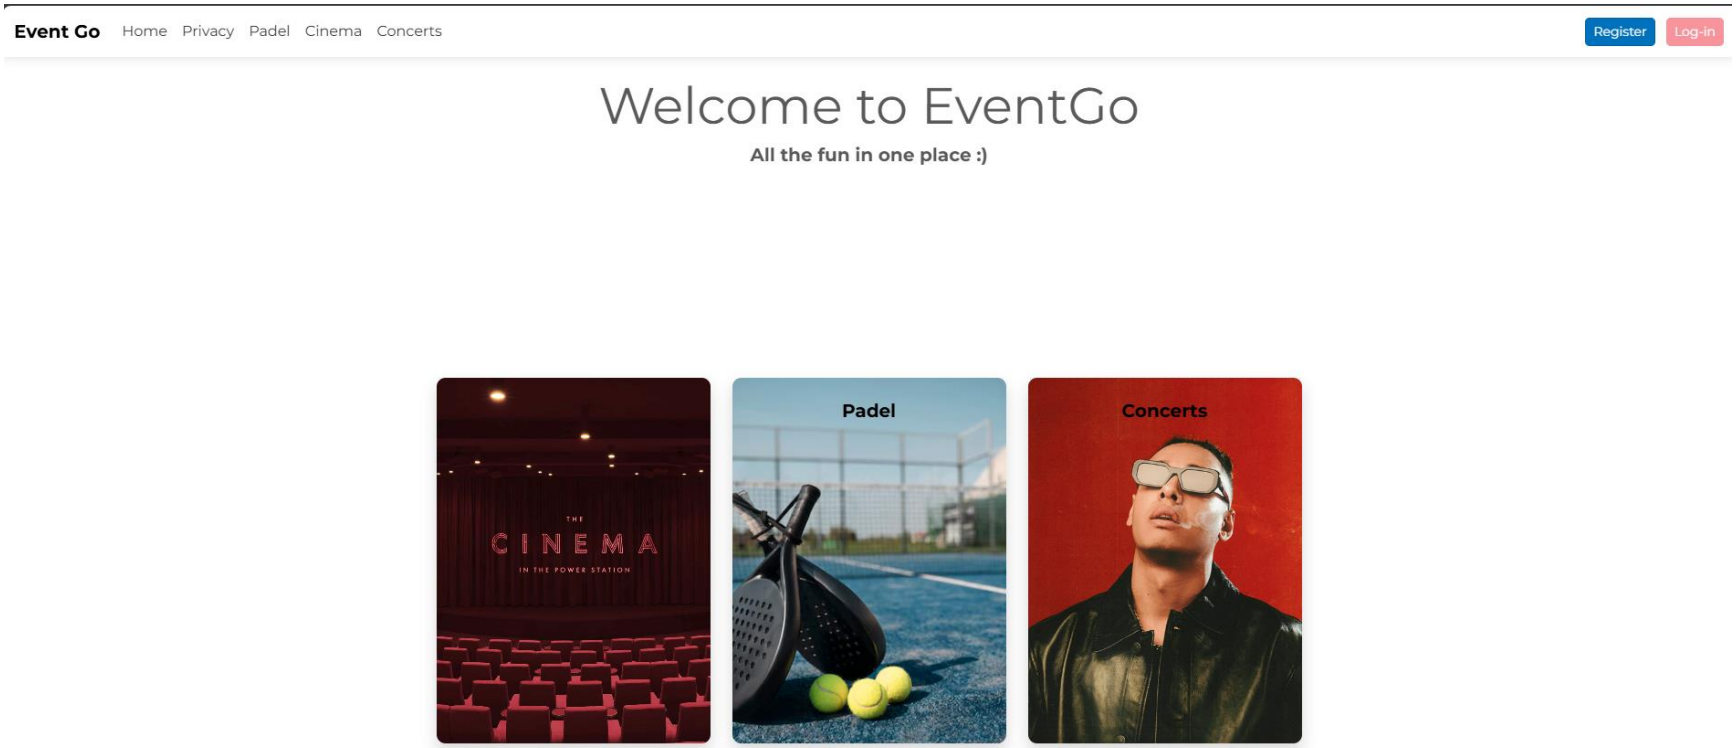
Padel

Users can explore places and available time, check prices per hour, They can select a specific place, choose their location and complete the booking through a secure online payment system. The platform's sports ticketing service ensures that users can easily book their favorite sporting events without hassle.

Cinema

The Cinema section allows users to book tickets for movies, displaying show times and ticket prices. Through the Cinema Ticket class, users can easily book their tickets and securely pay online using a credit card, offering a convenient way to enjoy their favorite films.

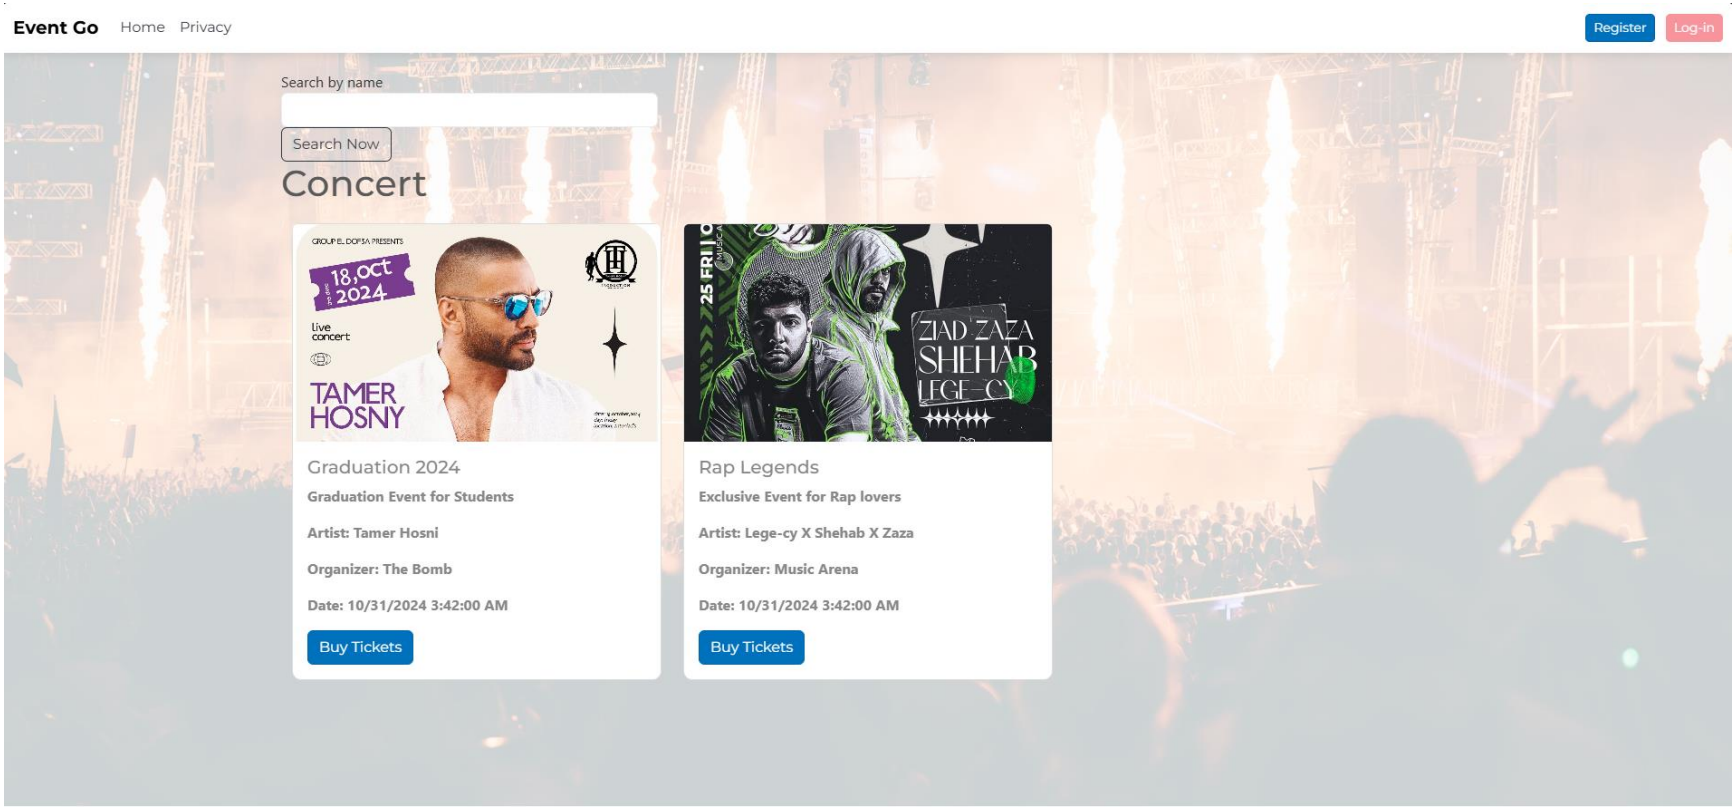
Home Page OverView



Concerts

- The Concerts section allows users to explore and book tickets for upcoming live events. Each concert listing includes essential details such as the date and time of the event, performing artist or band, and venue information. Users can easily browse available concerts, select their preferred event, and proceed to book a ticket.
- The backend code contains Concert Ticket class, which handles booking tickets, including selecting a seat. Once the user has chosen their seat, they can make the payment securely using their credit card through the platform's integrated online payment system.

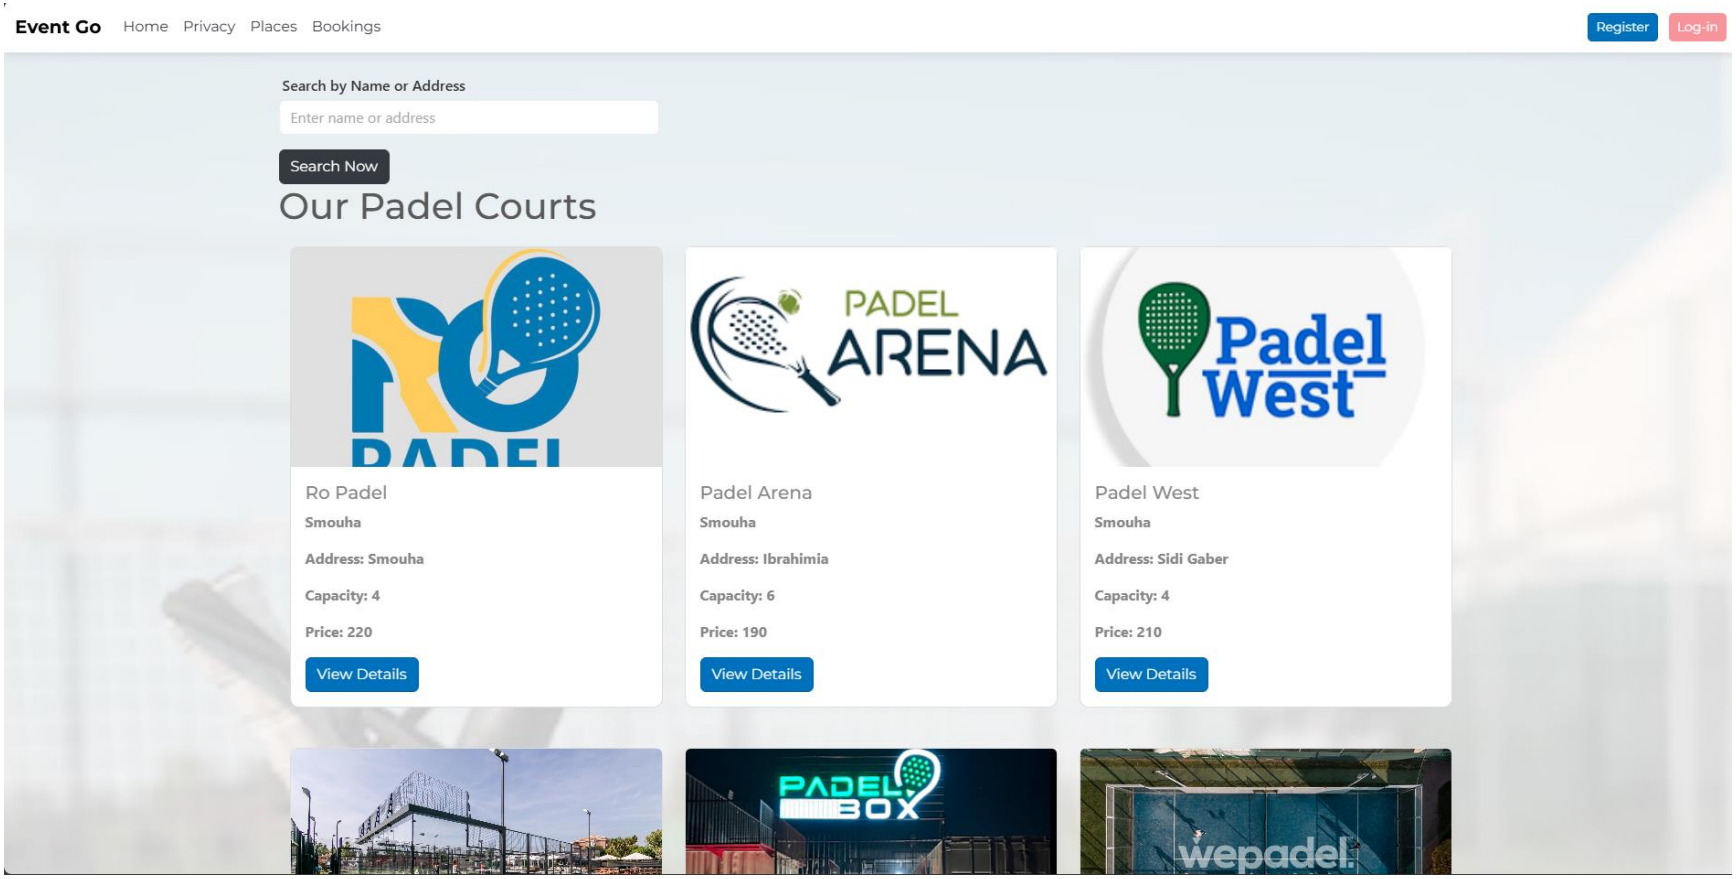
Concerts User View



Padel

- The Padel section allows users to browse and Reserve places for playing padel matches, displaying important information such as booking **details** and **prices**. Users can choose their desired place and location and book a specific time.
- The backend system, through a dedicated Booking class, handles the booking process and Time selection. After selecting their place and their time, users can complete the transaction securely with different payment methods, ensuring a smooth and convenient booking experience for sports fans.

Padel User View



Cinema

- The **Cinema** category provides users with a streamlined way to book tickets for movies. Users can browse through a list of currently showing films, complete with detailed information such as **movie showtimes**, **available screenings**, and **ticket prices**. Each movie listing allows users to select their preferred showtime and proceed to the ticket booking process.
- The backend system includes a specialized **CinemaTicket** class that manages the ticket booking, ensuring a smooth user experience. Once a user selects a showtime and books their ticket, they can proceed to payment using the platform's secure **online credit card payment** system. This category simplifies the entire process, allowing users to quickly secure tickets to their favorite movies with just a few steps, making the cinema-going experience more accessible and efficient.

Key Objectives

- Create an engaging journey for users to explore various entertainment options.
- Ensure easy booking and secure, multiple payment options.
- Provide admins with tools to manage site content and operations efficiently.

Technical Stack

- Backend:
  - .NET Core MVC with 3-Tier Architecture
  - ASP.NET Core and Entity Framework Core for server logic
  - Microsoft SQL Server for database management

- Frontend:
  - HTML5, CSS3, JavaScript, Bootstrap5 for a responsive and user-friendly design

Functional Features - User Side

- Registration and login
- Search events by name/location
- Browse and explore listings for cinema, padel courts, and concerts
- Book online and access multiple payment options
- User-friendly interface for a smooth experience

Functional Features - Admin Side

- Manage users and monitor system operations
- Oversee site flow for smooth functionality
- Manage event listings and bookings
- Add and update events in real-time

Security Implementations

- Secure authentication and authorization for users
- Encryption of sensitive data during payment
- Regular updates and protocols to ensure data integrity and security
